

## Overview

Magellan Builder is an event-driven, object orientated real-time Supervisory Control and Data Acquisition (SCADA) package.

It provides a simple, intuitive mechanism to effortlessly design either trivial or sophisticated supervisory and control programs using a drag-and-drop approach. Magellan eliminates the need to sift through hundreds of meaningless device address or protocol descriptions by displaying a graphical representation of all points available in a network of controllers.

Using a drag-and-drop approach, data values can be displayed in a variety of ways leaving the designer more time to construct a useful and practical interface for the end-user.

Magellan Builder projects are hosted by Magellan Server and viewed locally or remotely using Innotech Magellan.

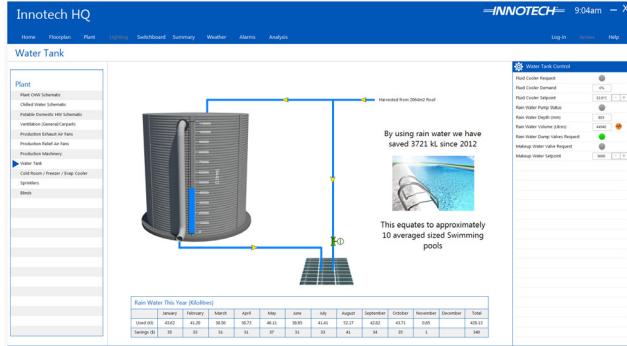

## Features

- Event driven processing strategy for fast, efficient operation
- Real time operation allows new values to be displayed as soon as they change
- Alter project adjustable items such as setpoints and schedules
- Multi-level access control to a limited number of users
- Use a wide range of built in graphical objects
- PNG with transparency & JPG support
- Automatically resizes to suit different screen resolutions
- Point-based licencing

## Specifications

Uses **Innotech iComm** to access devices

## Supported Operating Systems

- Windows® 10 Professional 64-bit
- Windows® Server 2019
- Windows® Server 2016 R2

## Windows Minimum System Requirements

- Intel® Pentium® 2.8GHz dual core processor or equivalent
- 8GB of RAM
- 1920 x 1080 display with 16-bit video card for standard graphics
- 350MB Hard Disk Space
- Keyboard and Microsoft® mouse or compatible pointing device
